

Mustimeters and wine hydrometers

Code KLL001, KLL002, KLL003, KLL004, KLL005

Mustimeters and wine hydrometers are a special type of hydrometers used during the vinification process. Mustimeters measure the quantity of sugar present in grape juices that gives an idea of the degree of alcohol that will acquire the wine prepared from those musts.

For their part, wine hydrometers measure the percentage of alcohol volume in wines at the end or during their elaboration process.

Nahita offers this series of mustimeters with several measuring scales (Baumé, density and degree of probable alcohol) as well as a wine hydrometer, which are very useful in quality control laboratories and in wineries.

Code	Description	Range	Divisions	Length (mm)	Diameter (mm)
KLL001	Mustimeter	0-30 °Be	1/2	290	17
KLL004	Mustimeter	7-16 °Be	1/5	250	23
KLL005	Mustimeter	0-20 °Be 4-22% probable alcohol	1/5 1/5	260	20
KLL003	Mustimeter	4-18 % probable alcohol 980-1130 kg/m ³	1/2 1	310	19
KLL002	Wine hydrometer	(-) - (+30) % alcohol volume	1/1	245	20

Triple scale wine and beer hydrometer

Code KLL006

Reads in three scales: Specific Gravity, Brix/Balling, and Potential Alcohol.

Using this device is a convenient and affordable way for homebrewers and winemakers to:

- Approximate an alcohol percentage potential when yeast pitching is occurring
- Estimate alcohol percentage by comparing before and after rates
- Accurately determine the completion of the fermentation process or when it needs to stop

Code	Range	Length (mm)	Diameter (mm)
KLL006	0,980-1,110 sp. gr. -2 a 14% vol. 26-288 sug/L	270	18
