

CAPS AND PLUGS

These end caps and plugs are designed to protect the ends of tubes or protruding cylindrical sections during transport, handling and other procedures in which orifices must be protected from impact, splashing, paint, etc.

The item type-number corresponds to the recommended diameter of the tube to be protected.

Two standard grades are available.

Type	Dimensions (in mm)**		VERSILIC		ENGLISH TYPE

STOPPERS WITH SKIRTS

Stoppers with skirts are specially designed to afford extra protection of tube ends during transport, handling and other operations during which tubes require both internal and end protection.

These stoppers provide an excellent seal.

They are also suitable for bottling applications in industrial laboratories and many industries.

Available by special order in ISO-VERSILIC grade.
